

Shakeer Gittola

Full Stack Developer · Next.js · Node.js · React.js · AI/LLM Integration

+91-7013547871 | gshakeer650@gmail.com | linkedin.com/in/shakeer-gittola | github.com/Shakeerg

PROFESSIONAL SUMMARY

Full Stack Developer with close to a year of production experience building, deploying, and maintaining full-stack web applications using Next.js, React.js, and Node.js. Has real hands-on experience integrating AI/ML capabilities into an application, a personal project pairing the OpenAI API with a Pinecone-backed RAG pipeline, and genuine third-party API integration experience, including a Razorpay payment gateway with webhook-based async processing. Comfortable taking ownership of a project with unclear requirements, having helped build an e-commerce platform from scratch on a small team with no existing codebase to inherit. Debugs issues across the full stack methodically.

WORK EXPERIENCE

Software Development Engineer, Associate

Genpact (Client: Meta Platforms Inc.) · Hyderabad | Oct 2025 – Present

- Maintain the Node.js and Python backend behind WhatsApp Business, Facebook, and Instagram integrations for enterprise clients, taking individual features from a written requirement through to something running in production.
- Spend a good chunk of time on Python automation for webhook-driven workflows, tracking down why a specific integration was failing rather than just patching around the symptom.
- Use Claude Code and Copilot daily, but treat their output as a first draft to check line by line, not a final answer, especially in production-facing code.
- Sit in an Agile team with product and engineering, reviewing teammates' code in sprint ceremonies and taking feedback on pull requests seriously enough to change the approach on the next one.

Full Stack Developer Intern

Zaalima Development (E-Commerce Platform) · Remote | Feb 2025 – Jun 2025 (4-month internship)

- Built the e-commerce platform from scratch as part of a small 2-3 person team, developing backend APIs with Node.js and Express.js and responsive UI with React.js and Next.js, and contributing across both frontend and backend since there was no existing codebase to inherit.
- Designed and optimised MongoDB and PostgreSQL databases, including schema design, indexing strategy, and query optimisation.
- Integrated third-party APIs including Razorpay payment gateway with webhook-based async processing, and Google and Facebook OAuth.
- Wrote unit and integration tests using Jest and tested API endpoints with Postman; containerised services with Docker and deployed to AWS, using S3 for asset storage. Used Cursor, Claude Code, and Copilot throughout, treating suggestions as a starting point to verify rather than a final answer.

PROJECTS

Full Stack Rental Platform (Personal Project)

Node.js · React.js · Next.js · MongoDB · PostgreSQL · REST APIs · Docker · AWS · CI/CD

- Built a full stack property management platform: Node.js backend APIs, React.js and Next.js frontend, MongoDB for property listings and user data, PostgreSQL for transactional records.
- Integrated third-party APIs for payment processing and OAuth authentication, owning every feature from development to deployment, including UI components, backend logic, and database schemas; implemented Docker containerisation and a CI/CD pipeline for deployments on AWS.

AI Text Summarisation Tool with RAG Pipeline (Personal Project, 2026)

Python · OpenAI API · Pinecone · RAG

- Built a text summarisation tool on the OpenAI API with prompt engineering, then layered in a RAG pipeline backed by Pinecone so responses stay grounded in source documents instead of the model's memory alone.

Distributed Storage System

Node.js · Python · MongoDB · PostgreSQL · Redis · Docker · AWS

- Designed a scalable distributed system using a microservices architecture with modular Node.js services, splitting data across MongoDB and PostgreSQL by access pattern and adding Redis caching to cut response latency.

TECHNICAL SKILLS

Core Stack: Node.js, React.js, Next.js, Express.js, JavaScript (ES6+), TypeScript, Python

Databases: MongoDB, PostgreSQL, MySQL, Redis, SQL: schema design, query optimisation, indexing

APIs: REST APIs, GraphQL, OAuth 2.0, JWT, Webhooks, WebSockets, third-party integrations

Cloud & DevOps: AWS (EC2, S3), Docker, Kubernetes (basic), CI/CD, Git

Testing: Jest, Postman (API/endpoint testing)

AI Tools: Cursor, Claude Code, GitHub Copilot: daily use with critical review and validation

Methodology: Agile, Cross-functional collaboration, Peer Code Review, ownership mindset

EDUCATION

B.Tech in Electronics and Communication Engineering

Sree Vahini Institute of Science and Technology | 2020 – 2024
